

the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion, from 1.1 billion in 1980 to 2.3 billion in 1999 (United Nations 2000). The number of people aged 15 years and over has increased by 1.1 billion, from 1.1 billion in 1980 to 2.2 billion in 1999.

There is a growing concern that the world's population will continue to grow rapidly, and that the world's resources will be depleted. The United Nations (2000) predicts that the world's population will reach 6.3 billion by 2050, and that the world's resources will be depleted by 2050. The United Nations (2000) also predicts that the world's population will be 7.5 billion by 2050, and that the world's resources will be depleted by 2050.

The United Nations (2000) also predicts that the world's population will be 8.5 billion by 2050, and that the world's resources will be depleted by 2050. The United Nations (2000) also predicts that the world's population will be 9.5 billion by 2050, and that the world's resources will be depleted by 2050. The United Nations (2000) also predicts that the world's population will be 10.5 billion by 2050, and that the world's resources will be depleted by 2050.

The United Nations (2000) also predicts that the world's population will be 11.5 billion by 2050, and that the world's resources will be depleted by 2050. The United Nations (2000) also predicts that the world's population will be 12.5 billion by 2050, and that the world's resources will be depleted by 2050. The United Nations (2000) also predicts that the world's population will be 13.5 billion by 2050, and that the world's resources will be depleted by 2050.

The United Nations (2000) also predicts that the world's population will be 14.5 billion by 2050, and that the world's resources will be depleted by 2050. The United Nations (2000) also predicts that the world's population will be 15.5 billion by 2050, and that the world's resources will be depleted by 2050. The United Nations (2000) also predicts that the world's population will be 16.5 billion by 2050, and that the world's resources will be depleted by 2050.

The United Nations (2000) also predicts that the world's population will be 17.5 billion by 2050, and that the world's resources will be depleted by 2050. The United Nations (2000) also predicts that the world's population will be 18.5 billion by 2050, and that the world's resources will be depleted by 2050. The United Nations (2000) also predicts that the world's population will be 19.5 billion by 2050, and that the world's resources will be depleted by 2050.

The United Nations (2000) also predicts that the world's population will be 20.5 billion by 2050, and that the world's resources will be depleted by 2050. The United Nations (2000) also predicts that the world's population will be 21.5 billion by 2050, and that the world's resources will be depleted by 2050. The United Nations (2000) also predicts that the world's population will be 22.5 billion by 2050, and that the world's resources will be depleted by 2050.

The United Nations (2000) also predicts that the world's population will be 23.5 billion by 2050, and that the world's resources will be depleted by 2050. The United Nations (2000) also predicts that the world's population will be 24.5 billion by 2050, and that the world's resources will be depleted by 2050. The United Nations (2000) also predicts that the world's population will be 25.5 billion by 2050, and that the world's resources will be depleted by 2050.
