

the $\mathcal{H}_0$ hypothesis, the test statistic T_n is asymptotically normal with mean 0 and variance σ^2 .

Let $\mathcal{H}_1$ denote the hypothesis that $\theta \neq \theta_0$. The power function of the test is defined as $\beta(\theta) = P_\theta(T_n \geq c)$, where c is the critical value. The power function is a function of θ and n . The power function is a function of θ and n .

The power function is a function of θ and n . The power function is a function of θ and n .

The power function is a function of θ and n . The power function is a function of θ and n .

The power function is a function of θ and n . The power function is a function of θ and n .

The power function is a function of θ and n . The power function is a function of θ and n .

The power function is a function of θ and n . The power function is a function of θ and n .

The power function is a function of θ and n . The power function is a function of θ and n .

The power function is a function of θ and n . The power function is a function of θ and n .

The power function is a function of θ and n . The power function is a function of θ and n .

The power function is a function of θ and n . The power function is a function of θ and n .

The power function is a function of θ and n . The power function is a function of θ and n .

The power function is a function of θ and n . The power function is a function of θ and n .

The power function is a function of θ and n . The power function is a function of θ and n .

The power function is a function of θ and n . The power function is a function of θ and n .

The power function is a function of θ and n . The power function is a function of θ and n .

The power function is a function of θ and n . The power function is a function of θ and n .

The power function is a function of θ and n . The power function is a function of θ and n .

The power function is a function of θ and n . The power function is a function of θ and n .

The power function is a function of θ and n . The power function is a function of θ and n .

The power function is a function of θ and n . The power function is a function of θ and n .

The power function is a function of θ and n . The power function is a function of θ and n .

The power function is a function of θ and n . The power function is a function of θ and n .

The power function is a function of θ and n . The power function is a function of θ and n .

The power function is a function of θ and n . The power function is a function of θ and n .
